

Favit is a powerful and easy-to-handle personal content deliverer that is called to solve the problem with the exploding web. In order to do so favit creates a content stream of what is just interesting to the user. Through standard display of various information – articles, posts, video, images, audio – that originate from all possible sources, favit ensures easy and efficient content consumption.

The development of the platform started in 2008 by a small team of software engineers. In early 2009 Favit Network launched its Beta in Bulgarian language.

The goal is to make Favit Network a major player in the web content delivery business in Central and Eastern Europe, covering the most linguistic domains in the region - Russian, Polish, Turkish, Romanian, Greek, Czech, Slovakian, Estonian and Ukrainian.

Favit is a founding member and a proactive supporter of the Digital Spaces Living Lab in Sofia, Bulgaria.
